

**Organibliss™** is a natural, organic plant supplement that helps plants to thrive, dramatically increasing their yield. Especially formulated for aiding in the growth of high value crops, Organibliss™ ingredients include extracts from robust plants that thrive in extreme environments such as sub-Saharan Africa.

**Organibliss™** is an emulsifiable concentrate that mixes with water to become a foliar spray. Organibliss™ technology is referred to as “bioadaptive supplementation” resulting in genuine “break-through” performance in natural plant health and cultivation strategies. Organibliss™ allows professional growers to achieve high productivity and plant health, while reducing their use of synthetic chemical nutrients and agricultural chemicals.

**Organibliss™** contains bionutrients known as limonoids and terpenoids. They are a major contributor to a plant’s ability to survive in harsh, extreme conditions.

## Application/Frequency

Measure out 2 drops Organibliss™ for each ounce of water [eg: 12 drops for 6 ounces of water], mix well and thoroughly mist the plants. Apply once a week until harvest. One ounce of water mixed with Organibliss™ will treat two plants at the beginning of the growing cycle. Apply every 7 days. Maintain the dosing ratio and frequency of application, but increase the amount of water and Organibliss mixture to correspond with the growth of the plants to ensure liberal coverage of all foliage. Spray the mix on the plants until the leaves and stems are moist. Use daily to respond to biological and environmental pressures, and then revert to every 7 days once they’re under control. Use all of the mixture the same day that it is prepared: 2-day shelf life once mixed.

[2 drops + 1 ounce water treats two plants 1 time]

## Metric Conversions

**1 liter = 33.82 US fluid ounces**

**1 US fluid ounce = 29.57 ml**

**1 liter = 0.26 US gallons**

**1 US gallon = 3.79 liters**

**1 US gallon = 3785 ml**

**1 gallon = 128 ounces**

**20 drops = 1ml**

**1 oz = 600 drops [20 X 30 = 600]**

**1 drop = 0.05 ml**

## Organic Plant Growth Enhancer

**ORGANIBLISS, LLC** is a natural products biotechnology company located in the MidMichigan Innovation Center in Midland, Michigan, USA.

Organibliss™ was developed by research scientists and microbiologists that formerly worked for world renowned chemical company.

## Organic

Organibliss™ is OMRI Listed through the *Organic Materials Review Institute* in Eugene, Oregon.

It is all natural, and organic.

## Amazing results for the intermediate in Organibliss™

Field Tomatoes: 70% increase in cumulative yield mass, compared to untreated control (2008, Saginaw Valley State University)

Bell Peppers: 80% increase in cumulative yield mass, compared to untreated control (2009, Intermediate Manufacturer's Internal Study)

Cherry Tomatoes: 17% increase in fruit count, compared to untreated control (2009, Saginaw Valley State University)

Blueberries: Outperformed leading brands of chemical inputs in total percentage of marketable fruit (2009, Michigan State University)

Greenhouse Strawberries: 9-fold increase in fruit count, compared to untreated control (2008, Hillsdale College)
